Wi-Fi Quick Start Guide

To create a NEW Wi-Fi connection between the HP printer and a Wi-Fi network, choose one of the following methods.
Note: Before you begin, make sure that an Ethernet cable has not been connected to the printer. Connecting an Ethernet cable turns off the printer's Wi-Fi capabilities.

Method 1: Use a mobile device (such as a smartphone or tablet)

1. Make sure your mobile device has been connected to your Wi-Fi network and you know your Wi-Fi password.
2. On the printer, press and hold the Wi-Fi Setup* button on the back of the printer for 3 seconds. Purple light will begin moving along the front of the printer, indicating that the printer is in Setup Mode. (The light will become light blue and stop moving when the printer is connected to the Wi-Fi network.)
3. If you have never installed the HP Smart app before, open a web browser, visit 123.hp.com to install the HP Smart app, and then follow the instructions on your mobile device.
